

PEXA Projects

An overview for property developers

Receive funds fast and enjoy greater reliability of settlement

What is PEXA Projects?

PEXA Projects allows for the efficient settlement of property via an online property exchange process for large scale multi-lot developments. PEXA Projects provides additional features including a single project overview dashboard and the ability to complete bulk actions across PEXA Workspaces. Together with the many benefits of settling online, these help streamline the processes involved in the co-ordination and execution of settlements.

What are the benefits of PEXA Projects?

- Receive cleared funds faster and improve cash flow with electronic transfer of funds direct into nominated bank accounts.
- Settle a large number of lots, or an entire development project on the same day, and even at the same time.
- View the status of all transactions within a development from a single consolidated project view.
- Gain transparency over settlement progress.
- Reduce the administrative time and effort required for co-ordinating settlement of off-the-plan sales.
- Minimise the amount of paper required in the property exchange process leading to a more environmentally friendly workflow.

What next?

Contact PEXA or your legal/conveyancing representative to find out how PEXA Projects can assist with your upcoming development projects.
